4/26/05*
1. **(Previously Presented)** A watercraft comprising:
    - a hull having port and starboard sides and a stern;
    - a deck supported by the hull;
    - a propulsion system mounted to at least one of the hull and the deck;
    - a helm connected to the deck and configured to control the direction of the watercraft;
    - a pole mounted to the deck;
    - a compensation device operatively connected to at least one of the deck and the hull;
    - a controller in communication with the compensation device; and
    - a sensor operatively connected to the pole and in communication with the controller,

the sensor being configured to sense a direction of a pulling force exerted on the pole and communicate a signal regarding the direction of the force to the controller,

the controller being configured to send a signal to the compensation device based on the signal from the sensor to reposition the watercraft.
  2. **(Previously Presented)** The watercraft of claim 34, the compensation device including a starboard vane operatively connected to the starboard side of the hull and a port vane operatively connected to the port side of the hull, wherein the vanes are selectively movable in response to the signal from the controller.
  3. **(Previously Presented)** The watercraft of claim 34, the compensation device including a starboard trim tab and a port trim tab operatively connected to the stern and in communication with the controller, wherein the trim tabs are selectively movable in response to the signal from the controller.
  4. **(Previously Presented)** The watercraft of claim 34, the pole including an upper portion and a lower portion, the upper portion being rotatably mounted to the lower portion.
